STRONGER SPEEDS. SMARTER COMMUNITIES.

What does it mean to be a gig or multi-gig provider?

Smart Rural Community providers like [DBA] who offer gigabit or better broadband can apply for Gig and Multi-Gig Provider status, presented by NTCA—The Rural Broadband Association, a national organization committed to helping connect communities across rural America. This recognition highlights our commitment to deploying advanced fiber networks that bring world-class speeds to rural areas—ensuring our communities aren't left behind in the digital economy.

What Is a Gig?

Gig is short for gigabit per second (Gbps) which is a measure of internet speed. One Gig equals 1,000 Mbps. Most local fiber networks deliver symmetrical speeds (equal upload/download), perfect for video calls, cloud backups, farm tech uploads, and remote work.

Speed Snapshot

- ⚡ **25 Mbps** — Basic browsing
- ⚡ **100 Mbps** — Smooth HD streaming, video calls, multiple devices
- ⚡ **1 Gig** — 4K streaming on multiple screens, gaming, remote work, smart home devices
- ⚡ **Multi-Gig (2–5+ Gbps)** — Instant large file transfers, seamless cloud backups, advanced home offices, VR/AR, future-ready technology

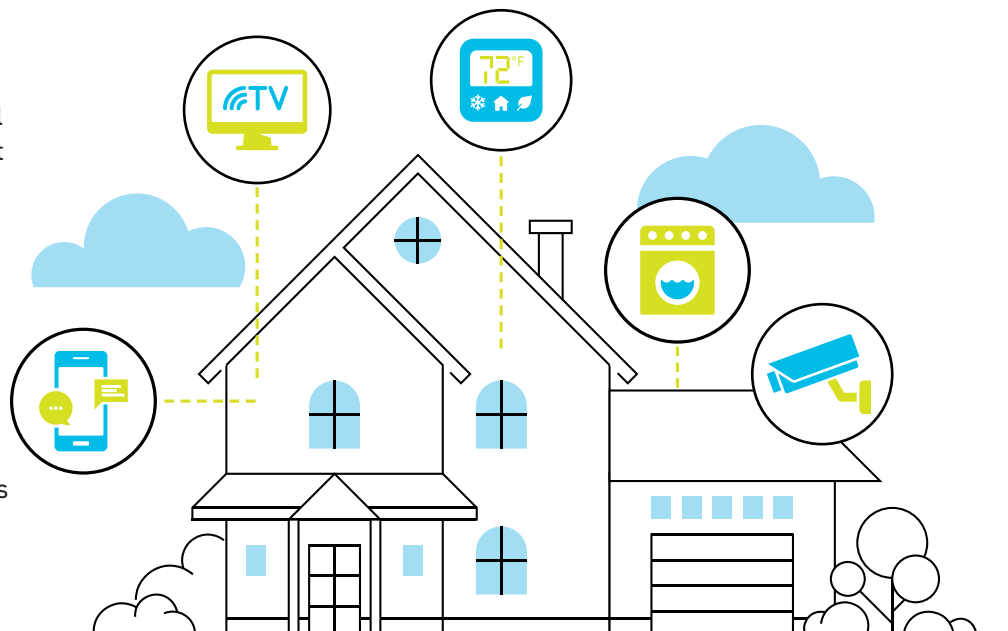

Why It Matters

Gig and multi-gig service means fewer interruptions, faster uploads, smoother streaming, and more opportunities for your household or business.

The Smart Home

All of these devices share your internet connection. Gig service ensures they all work smoothly, simultaneously, without any slowdowns.

- Smart 4K TVs
- Laptop w/video calls
- Tablet with homework on screen
- Gaming console
- Smartphones on Wi-Fi
- Printer
- Smart thermostats, security cameras and doorbells
- Smart appliances
